

For 30 years Shields Environmental has worked with the world's leading telecommunications companies to manage, remarket and recycle their surplus and redundant network equipment.

We provide a fully managed solution for your surplus and redundant network equipment

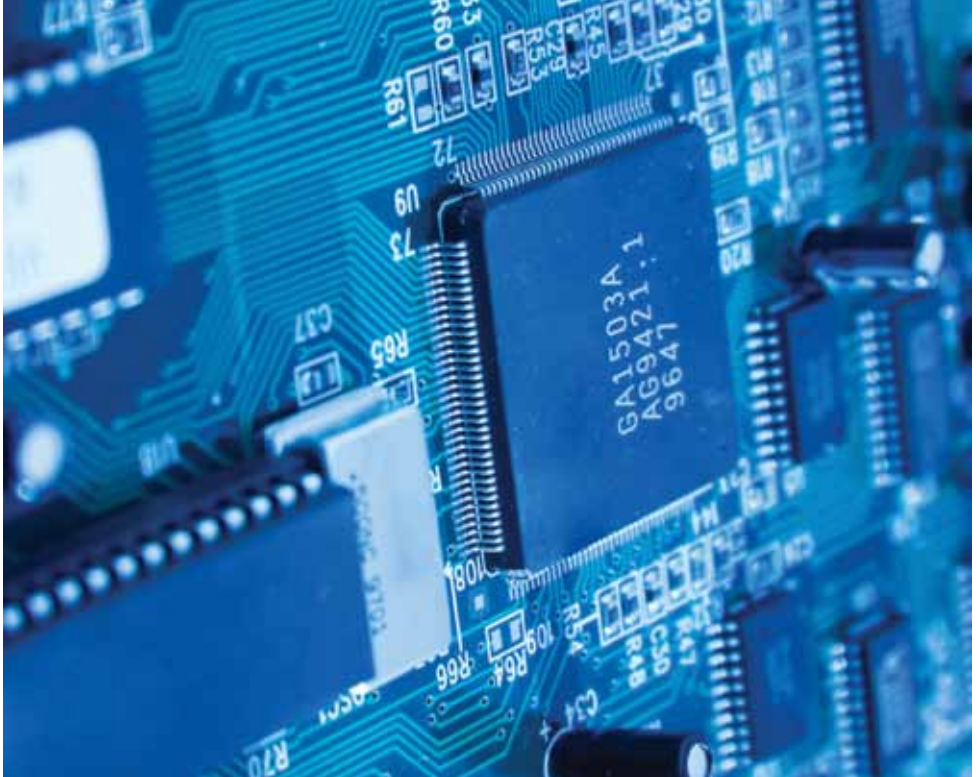

---

**Shields has built an unparalleled reputation for service excellence in the re-use, remarketing and recycling of surplus network assets for network operators across the World.**

Our entrepreneurial spirit, innovation, knowledge of the industry, environmental commitment and customer service are what set us apart. Leading telecoms companies around the world rely on us for their equipment needs – supporting legacy networks, de-installation, refurbishment and resale of surplus network equipment; and a range of other services including energy conservation services, environmental reporting, and compliance.

We have helped these companies significantly reduce costs, as well as their impact on the environment – improving financial returns and protecting their hard earned brands. In fact, through the services we deliver, we have returned over \$200 million to our clients through the successful management and remarketing of their retired network assets.

For companies interested in selling their network equipment, we offer a fully managed solution.

### Including

- Asset recovery/consignment services

---

**We were founded with a unique mission that closely links the interests of business with a passion for the environment.**

**We help turn cost centers into revenue streams and as a result we have enabled our clients to manage their networks with maximum financial efficiency and commitment to corporate responsibility.**

We work with the largest and most advanced network operators in the world.

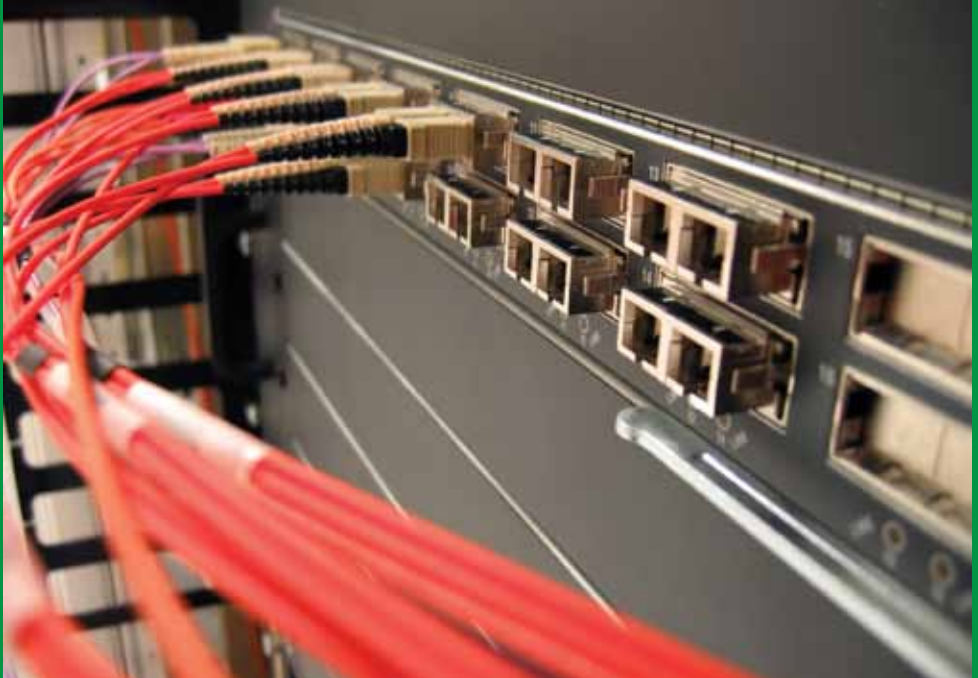

From full asset management to outright purchase solutions – we maximize your financial return.

Our project management, specialist and de-installation professionals work as part of your team to ensure a smooth transition with no service interruptions. We have managed projects at over 7,500 sites globally.

Some operators are generating hundreds of thousands of dollars a month from our solutions, and have the peace of mind that our environmental policies and processes exceed legislation and are fully audited.

The majority of the equipment can be refurbished and resold. If the product is too old or beyond economical repair, it will be sent for safe recycling ensuring that nothing goes to landfill, in compliance with all environmental legislation, your own stringent corporate responsibility targets, and our environmental management system which is certificated to ISO 14001 and registered to EMAS, the European Eco-Management and Audit Scheme.

We offer fully warranted equipment from leading manufacturers – ensuring complete peace of mind and cost effectiveness.
